

Journal of Behavioral Assessment

Volume 3, 1981

The *Journal of Behavioral Assessment* is broadly concerned with the measurement of human behavior in terms of cognitive, motoric, and physiological indices. The major emphasis is on assessment in the fields of behavior therapy, biofeedback, behavioral medicine, and neuropsychology. The journal is concerned with the objective application of empirically based techniques of measurement. Theoretical and review articles in measurement, particularly those which illustrate commonalities across theoretical orientations or research areas, are of special interest. Articles dealing with prevention, treatment, or rehabilitation are accepted only if they demonstrate important issues in assessment of behavior. The following kinds of contributions are published: theoretical and review articles, articles on the classification or organization of behavior, studies of the assessment of the environment or situations, normative approaches to assessment, basic or clinical studies which evaluate and/or develop assessment strategies, controlled case studies addressing important assessment issues, technical notes on instrumentation, and reviews of books on assessment.
